Brainstorming & Idea Prioritization Template

Date	15 September 2026
Team ID	SWTID-2026-3976
Project Name	AI FAQ Assistant API (AnswerBot)
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member listed as many ideas as possible without judging them at this stage. Ideas were then grouped by theme.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	S. Danielraj (Team Leader)	AI-powered FAQ generator: the user gives a topic and Google Gemini returns a ready question, answer and category.	AI / Gen AI	1
2	Vignesh Kumar	Keyword search over stored FAQs so customers can find answers instantly without contacting support.	Search / Retrieval	2
3	Arul Edvish	Secure JWT login, bcrypt password hashing and route protection so only authors can change their FAQs.	Security	3
4	Roydon Malachi Martin	Category-based organisation of FAQs (Technology, Education, Health, Banking, General).	Content Management	4
5	S. Danielraj	"Ask the AI" endpoint that answers a free-text customer question on the spot using Gemini.	AI / Gen AI	1
6	Vignesh Kumar	Centralised error handling and input validation so the API never leaks database errors.	Reliability	3

Step 2: Idea Prioritization

Each grouped idea was rated on feasibility and importance, then the final ideas to move forward with were selected.

Group No.	Final Idea	Feasibility (High/ Medium/Low)	Importance (High/ Medium/Low)	Priority	Selected (Yes/No)
1	AI-generated FAQs and instant AI answers (Gemini)	High	High	P1	Yes
2	Keyword search across FAQs	High	High	P1	Yes
3	JWT authentication, validation and centralised error handling	High	High	P1	Yes
4	Category management for FAQs	High	Medium	P2	Yes

Final decision: The team will build the **AI FAQ Assistant API**, a secure REST backend (Node.js, Express, MongoDB) that combines authenticated FAQ management, keyword search and Google Gemini powered content generation.
