Project Name	AI FAQ Assistant API (AnswerBot)
Maximum Marks	4 Marks

Empathy Map

This empathy map views the customer from four perspectives - what they Say, Think, Do and Feel - in relation to the problem the AI FAQ Assistant API addresses. The persona is Priya, taken from the project case study.

SAYS

- "I answer the same questions every single day."
- "I need FAQs written and categorised faster."
- "Customers should find answers without calling us."

THINKS

- Manual FAQ writing wastes my team's time.
- I cannot see which questions customers ask most.
- Only trusted authors should be allowed to edit answers.

PRIYA
(Customer Support Operations Manager)

DOES

- Reads through ticket backlogs and copies answers into documents.
- Sorts questions into topics by hand.
- Reviews and updates old FAQ entries.

FEELS

- Overloaded by repetitive work.
- Anxious about out-of-date or wrong answers.
- Relieved when a customer self-serves.
