Project Executable Files

Date	28 September 2026
Team ID	SWTID-2026-3976
Project Name	AI FAQ Assistant API (AnswerBot)
Maximum Marks	3 Marks

Project Executable Files

This section lists the executable and deployable files of the AI FAQ Assistant API and how to run them.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes (README.md)
3	requirements.txt / package.json / dependency file	Yes (package.json, package-lock.json)
4	Database schema / seed files (if applicable)	Yes - Mongoose schemas in src/models (no seed data needed)
5	Environment configuration file (.env.example or similar)	Add .env.example (real .env is not submitted because it holds secrets)
6	Deployed application URL (if hosted)	NA - runs locally
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes (test_api.js, Postman collection, Postman screenshots)
10	Demo video or walkthrough (if required)	Yes - link below

Step 2: File / Folder Structure

```
FAQ/
  .env
  package.json, package-lock.json
  README.md
  test_api.js
  AI_FAQ_Assistant_API.postman_collection.json
  src/
    app.js, server.js
    config/db.js
    controllers/ aiController.js, authController.js, faqController.js
    middleware/ authMiddleware.js, errorMiddleware.js, validationMiddleware.js
    models/ FAQ.js, User.js
    routes/ aiRoutes.js, authRoutes.js, faqRoutes.js
    services/ geminiService.js
    utils/ helpers.js
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not hosted. Local URL: http://localhost:5001
Login Credentials (Demo)	Register through POST /api/auth/register, then log in to obtain a token (any name, email and password of 6+ characters)
Platform / Hosting Provider	Local Node.js server with MongoDB Atlas cloud database
Repository Link	[Add GitHub repository URL]
Demo Video Link	[Add API testing video URL]

Step 4: Run Instructions

- Install Node.js 18+ and npm 9+, and open the project folder in VS Code.
- Run `npm install` to install dependencies.
- Create a `.env` file with the port, MongoDB connection string, JWT secret and Gemini API key.
- Run `npm run dev` (or `npm start`). The console shows "MongoDB Connected" and the server port (5001).
- Open Postman and import the collection, then call register, login and the other endpoints.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	No graphical front end; the API is used through Postman or another client	A web or mobile front end is planned
2	Search is keyword-based, not true semantic search	Vector search with embeddings planned
3	Admin/editor role screens, likes and feedback are not yet built	Listed in the future roadmap
4	Load, CPU and memory tests not run	Planned with JMeter/k6
